

Chemtrails: An Updated Look at Aerosol Toxins

Part 1.

©By Dr. Ilya Sandra Perlingieri

Feb. 3, 2011

January 22, was the first Chemtrails Awareness Day.(1) For those of us who, for years, have been researching these aerosol toxins that continue to be sprayed on us, it was a day to redouble our efforts once again to educate those who have not been paying attention to the momentous changes in our skies. Just look up! We rarely have full days of real sunshine. Instead, now we have 20% less sun, and mostly a blanket of artificial “clouds” filled with toxins. This is due to illegal Weather Modification programs that have never had any official public discussion. Our air quality, over the past 12-15 years, has declined dramatically. Do we really think we are immune to these poisonous effects? If one connects the dots as to how this has affected our well being, all we need do is see how illness has increased significantly in humans, animals, and plant life (in short, all living things). Millions of people are getting sicker, not better. What has happened is staggering in implications for all life on this planet. Yet, despite two documentaries(2), the important and vital research contributions of Clifford Carnicom, various Skywatch and other citizens groups’ concerns, Dr. R. Michael Castle’s 2007 Unified Atmospheric Preservation Act (stalled in Congress), and possibly thousands of calls and letters to those in charge, US public officials and agencies continue to either ignore our real concerns or dismiss them as unfounded. There has been absolutely NO accountability and NO precaution. Instead, lies and deceit abound. This cannot continue. How many more days do we want to be poisoned?

A new preliminary draft report by Arizona Skywatch shows dramatic increases in heavy metals that simply do not belong in our air. NOTE: The level of Manganese is so shockingly high that Arizona Skywatch also included additional information

about it (see below). This report will be posted online shortly.(3) Here are the pre-publication results. [NOTE: the Manganese and Copper ratio.]

This is only a preliminary overview of Arizona air particulates.

2010 Air Particulates

These figures indicate how many times they are over the “allowable” toxic limit:

Aluminum: 15.8

Antimony: 63.3 [This is not a typo]

Arsenic: 418 [This is not a typo]

Barium: 5.3

Cadmium: 6

Chromium: 6.4

Copper: 9

Iron: 43.5 [This is not a typo]

Lead: 15.7

Manganese: 513.8 [This is not a typo]

Nickel: 10.7

Zinc: 7.5

These figures show that there is no air “quality” [a word meaning: excellence or worth]; but instead, there is a combination of hazardous metals permeating the air. These toxins do NOT belong in the air we are breathing. In fact, if precaution were accurately factored in, the “allowable” toxic limit should be ZERO. Due to the extremely high level of Manganese, Arizona Skywatch also includes the following information on this metal:

We are looking at a few metals that are without question harmful to health and environment, such Al [Aluminum] and Ba [Barium]. The third year of air particulate collection and analysis shows lower Al and Ba but still much higher than rated as safe. Manganese [Mn] continues to be extremely high for 2010. The full report for 2010 is not complete, but do not be fooled by the idea that Iron or Mn are harmless --there are defined health impacts with high intake. Not all the Manganese being ingested will be from food, fine particles of Manganese passes

through blood-brain barrier and can be deposited. [For how this happens, see Mark Purdy's research below.] See 2008 and 2009 particulate report analysis --2010 will be finished and posted in the coming weeks.

Manganese

Manganese is a pinkish-gray, chemically active element. It is a hard metal and is very brittle. It is easily oxidized. Manganese is reactive when pure; and as a powder it will burn in oxygen. It reacts with water (it rusts like iron) and dissolves in dilute acids.

Applications

Manganese is essential to iron and steel production. At present, steel making accounts for 85% to 90% of the total demand. Manganese is a key component of low-cost stainless steel formulations and certain widely used aluminum alloys. Manganese dioxide is also used as a catalyst. Manganese is used to decolorize glass and make violet-colored glass. Other compounds that find applications are: Manganese oxide (MnO) and Manganese carbonate (MnCO₃): the first goes into fertilizers and ceramics and the second is the starting material for making other Manganese compounds.

Manganese in the environment

Manganese is one of the most abundant metals in soils, where it occurs as oxides and hydroxides, and it cycles through its various oxidation states. Manganese occurs principally as pyrolusite (MnO₂), and to a lesser extent as rhodochrosite (MnCO₃). More than 25-million tons are mined every year, representing 5-million tons of the metal, and reserves are estimated to exceed 3-billion tons of the metal. The main mining areas for Manganese ores are South Africa, Russia, Ukraine, Georgia, Gabon, and Australia. Manganese is an essential element for all species. Some organisms, such as diatoms, mollusks and sponges, accumulate Manganese. Fish can have up to 5 ppm and mammals up to 3 ppm in their tissue, although normally they have around 1 ppm.

Health effects of manganese

Manganese is...very common [and] can be found everywhere on earth. Manganese is one out of three toxic essential trace elements, which means that it is not only necessary for humans to survive, but it is also toxic when too-high concentrations are present in a human body. [Author's bold] When people do not live up to the recommended daily allowances, their health will decrease. But when the uptake is too

high, health problems will also occur. The uptake of Manganese by humans mainly takes place through food, such as spinach, tea, and herbs. The foodstuffs that contain the highest concentrations are grains and rice, soybeans, eggs, nuts, olive oil, green beans, and oysters. After absorption in the human body Manganese will be transported through the blood to the liver, the kidneys, the pancreas, and the endocrine glands. Manganese effects occur mainly in the respiratory tract and in the brain. [Author's bold] Symptoms of Manganese poisoning are hallucinations, forgetfulness and nerve damage. Manganese can also cause Parkinson's, lung embolism, and bronchitis. When men are exposed to Manganese for a long period of time, they may become impotent. A syndrome that is caused by Manganese has symptoms such as schizophrenia, dullness, weak muscles, headaches, and insomnia. Because Manganese is an essential element for human health, shortages of Manganese can also cause health effects [and include]: obesity; glucose intolerance; blood clotting; skin problems; lowered cholesterol levels; skeletal disorders; birth defects; changes of hair color; and neurological symptoms.

Chronic Manganese poisoning may result from prolonged inhalation of dust and fumes. The Central Nervous System [CNS] is the chief site of damage from the disease, which may result in permanent disability. Symptoms include: languor; sleepiness; weakness; emotional disturbances; spastic gait; recurring leg cramps; and paralysis. [AUTHOR NOTE: How many people who have caused "public" disturbances and/or have "behavioral outbursts" are actually suffering from environmental chemical brain injury, due to poisoning from heavy metals or other toxic chemicals, but are being treated like criminals? ISP] A high incidence of pneumonia and other upper respiratory infections has been found in workers exposed to dust or fumes of Manganese compounds. Manganese compounds are experimental equivocal tumorigenic agents.

Environmental effects of manganese

Manganese compounds exist naturally in the environment as solids in the soils and small particles in the water. Manganese particles in air are present in dust particles. These usually settle to earth within a few days. Humans enhance Manganese concentrations in the air by industrial activities and through burning fossil fuels. Manganese that derives from human sources can also enter surface water, groundwater, and sewage water. Through the application of Manganese pesticides, Manganese will enter soils. For animals, Manganese is an essential component of over 36 enzymes that are used for the carbohydrate, protein, and fat metabolism. With animals that eat too little Manganese, interference of normal growth, bone formation, and reproduction will occur. For some animals, the lethal

dose is quite low, which means they have little chance to survive even smaller doses of Manganese when these exceed the essential dose. Manganese substances can cause lung, liver and vascular disturbances, declines in blood pressure, failure in development of animal fetuses, and brain damage. When Manganese uptake takes place through the skin, it can cause tremors and coordination failures. Finally, laboratory tests with test animals have shown that severe Manganese poisoning should even be able to cause tumor development with animals. In plants, Manganese ions are transported to the leaves after uptake from soils. When too little Manganese can be absorbed from the soil this causes disturbances in plant mechanisms. For instance disturbance of the division of water to hydrogen and oxygen, in which Manganese plays an important part. Manganese can cause both toxicity and deficiency symptoms in plants. When the pH of the soil is low, Manganese deficiencies are more common. Highly toxic concentrations of Manganese in soils can cause swelling of cell walls, withering of leaves, and brown spots on leaves. Deficiencies can also cause these effects. Between toxic concentrations and concentrations that cause deficiencies a small area of concentrations for optimal plant growth can be detected. [Please watch for this posting soon on Arizona Skywatch.]

In addition to this information by Arizona Skywatch, there is also the important, but little-known independent scientific research done by the late Mark Purdy. He spent decades investigating, tracking, and testing soils around the world for heavy metals and what happens when human intervention changes the earth's natural metals balance. Purdy, who was also a devoted organic farmer, showed that the toxicity of organophosphate compounds used in the UK as sheep-dip pesticides were linked to the BSE [Bovine Spongiform Encephalopathy] epidemic. He also documented that Manganese particles in the air come from both natural geological sources AND military munitions, sonic [jet planes] and/or electromagnetic stimuli, and "metallic nano-clusters" or nanoparticles [such as nano-particles of fiber-coated Aluminum found in Chemtrails] "provide the driving force" that explain "the underlying mechanism which promotes the...pathology of TSEs."(4) Purdy documented that a high dose of Manganese and the resultant low dose of Copper [see ArizonaSkywatch figures above] may be the cause of BSE and other forms gathered under the nomenclature TSEs [Transmissible Spongiform Encephalopathy]. This also includes the human form of TSEs, variant Creuzfeldt

Jacob Disease [often known as vCJD]. His independent research is persuasive. Purdy notes:

Intensive exposures to natural and artificial sources of infrasonic acoustic shockwaves (tectonic disturbances, supersonic turbojets, etc.) have been observed in ecosystems supporting mammalian populations blighted by clusters of traditional and new variant strains of TSEs. But TSEs will only emerge in those 'infrasound-rich' environments which are simultaneously predisposed to specific environmental factors that induce a high Manganese (Mn) low Copper (Cu)/low zinc (Zn) ratio in brains of local mammalian populations.(5)

Purdy cites three issues that were responsible for the epidemic outbreak of BSE in the UK: "(1) Copper chelating insecticides; (2) intense infrashock waves from turbojet aircraft (which metamorphoses the atomic structure of Manganese) and causes the third issue: (3) Once Manganese changes, due to this shock, a "sleeping prion" comes into the scene to create havoc. He also writes: "the so-called 'infectivity' of the prion is a misnomer and should be correctly defined as the magnetic/'reactive' free-radical generating capacity of the Mn 3+ component of the prion."(6) TSE diseases are caused by prions --the body's proteins that fold abnormally-- and corrupt the surrounding molecules.

Purdy further notes that there are "numerous flaws in the conventional consensus on the origins of BSE...[and] environmental perspectives of TSEs [were] entirely excluded by research programs to date [2002] ...An impartial study of the epidemiology of BSE/vCJD suggests that the conventional consensus on the origins of BSE/vCJD is severely flawed."(7) The erroneous news reported internationally was that these so-called BSE cows became infected from eating feed with parts of dead sheep that were infected with scrapie. [A question never asked: Why were herbivorous animals given any feed containing other animal's carcasses?] First reported in 1985, by 1993 35,533 were reported to have mad-cow disease, aka BSE. NOTE: In the UK, about 6-million cows born before 1994 were slaughtered. BSE was not tracked in the US. This is yet another governmental

failure: what isn't tracked, then isn't a problem.

How does the increasing use of the secret HAARP [High Active Auroral Research Program] arrays around the world (not just in Alaska) link to the causes and increases in TSEs? HAARP can be included in what Purdy calls "tectonic disturbances." These have also been on a significant rise over the past decade. Also, how do the Weather-Modified ELF artificial clouds link to these neurodegenerative diseases that also include ALS [Amyotrophic Lateral Sclerosis, also known as Lou Gherig's Disease, and Parkinson's Disease]? Purdy also notes that TSEs:

can be linked to a solar charged battery on continuous charge; where the Mn [Manganese] contaminated/Cu [Copper] depleted circadian pathways absorb and pile up, rather than conducting the vital life force energies of incoming ultra-violet, acoustic and geomagnetic radiation. Instead of harnessing these energies for the body's own biorhythmic requirements, an infrasonic shock induced metamorphosis of the Mn atom intervenes; initiating an explosive free-radical mediated pathogenesis that perverts the healthy pathways of sound and light; Cu prions are replaced by 'hyperpolarized' Mn prions that seed self perpetuating 'cluster bombs' of radical mediated neurodegeneration. TSE ensues.(8)

Mark Purdy was awarded the 1997 Nobel Prize for his discoveries. His research has been confirmed by Auburn University (see reference 4).

How many more people in cities, towns, communities around the US, North and South America, Europe, and Australia are breathing air every day that is so hazardous to our very survival? Given our daily and deadly chemical, heavy metals, hormone disruption and ELF/plasma exposure, we must completely revise the so-called "official allowable toxic limit" for humans and other living things. As mentioned above, these "limits" should be ZERO.

We must have accurate information. With our current exposure on complete overload, we simply cannot wait more months or years. In fact, what do we think we are waiting for? In many parts of the US, the Chemtrails assault appears to have

intensified over the past two months. Just look at the artificially induced crazed weather around the US just during this past month: The temperature in Texas was 0-degrees yesterday; and whatever “white stuff” is falling from the skies throughout New England is not snow that looks anything like what used to fall 15 years ago. This white material smells full of chemicals. The Chemtrails-Weather Modification [read: destruction] situation is now far past critical.

How many people have had their air tested for these metals by a reputable independent lab [with no government ties]? How many of the millions of people who love to garden have tested their soils? When the robins return in the Spring, will they be pulling heavily-pesticided and Manganese-infested worms (part of the web of life and our food chain) out of the ground to eat? What other mass bird-deaths might follow? [Note: a well-known scientist told me that the recent mass bird and fish deaths were caused by man-made scalar activity. Their deaths were not natural.] It is now essential that, over a short period of time, we make a collective effort to get samples tested around the country. Resources can be pooled. Other things that could also be included for analysis are biological materials (molds, fungi, viruses), Phosgene, EDB [Ethylene dibromide], polymers, and possibly radioactive uranium, thorium, and strontium. We can then have a clear picture of the extent of the damage to which we are subjected. For our SAFETY, this is now of the utmost urgency.

Standard blood tests do not show up heavy metals poisoning. However, a simple hair analysis can detect heavy metals, so people have a base from which to determine their own risks. This hair analysis can even be done for your pets. Many toxic chemicals and heavy metals have overlapping and similar poisoning symptoms. So, it is always important to consult your primary health care provider. The only problem there is that most physicians have little-to-no-training in environmental medicine, or the effects of these omnipresent poisons, or how to treat them. This is now in abundant evidence with the nine-and-a-half-month mega-crisis situation in the Gulf of Mexico. There are not enough doctors who

really know how to deal with this epic catastrophe caused by the mixture of lethal Corexit dispersants, crude oil, and Chemtrails. Doctors Without Borders and the American Academy of Environmental Medicine both have been silent. This is reprehensible. Around the Gulf, hospitals are overwhelmed. This is an unprecedented brew of poisons. However, depending upon the extent of medical issues, it is possible to detox from heavy metal poisoning –provided this toxic aerosol assault stops.

Since the new millennium began, there has been a concerted and sped-up effort to destroy decades of environmental laws that had been enacted to protect us. We now have corporations running our country into the ground with the help of “public” officials whose salaries come from our taxes. This is done with the cooperation of news media that hardly do either any investigative journalism or truthful reporting. We now need this so urgently; and it is essential to our very continued existence. Mainstream news is distracting “spin” but certainly not real news. This is especially relevant, as it concerns our less well-educated younger generations who do not have accurate news input, or often the ability to analyze issues, and/or think critically. They are constantly on their cell phones and oblivious to much else. Here, too, there is abundant documentation and scientific reports of the brain damage done by daily cell phone use. Brain cancer, once rare, is now on a steep rise.

OTHER MEDICAL ISSUES:

The following are additional important issues relating to Chemtrails. This Haz-Mats [hazardous materials] assault has now created multiple illnesses, dramatic increases in chronic respiratory and coronary illnesses (now the leading cause of death in the US), and cancers. Two weeks ago, Becky, the sister of a friend, died from cancer. Her brother told me: “Becky was a very forgiving person and one thing she taught me, by the example in her life, is how to give grace to people...” She was young, and her death is another needless tragedy. Over the past five years, how many more of the people whom you love, or in your own circle of

friends, have died prematurely? These are our own private sorrows **WRIT LARGE!** There is no government precaution or accountability, little in the way of safe corporate practices [the latest is BP, called “Beyond Prosecution”], and no concept of prevention. All of this plays out in the toxins that envelop us 24/7/365, year in and year out, to wreck our lives and immune systems.

The higher the particulate matter in our air, the more illness we have; and, due to this, obviously, the higher the death rate is. Particulate matter “represents a complex class of air pollutants that differ from other gaseous air pollutants (e.g., ozone). The transport and effect of particulate matter, both in the atmosphere and in the human respiratory tract, are governed principally by particulate size, shape, and density.”(9) Many of the air pollutants are found in Chemtrails, as seen from the ArizonaSkywatch report above. All these environmental links to illnesses and deaths have been documented countless times.

Morgellons, unknown 15 years ago and now linked to Chemtrails, has now affected possibly millions of people.(10) [More evidence on this will be in Part 2, forthcoming.] The polymer filaments that have been found over many years repeatedly in the air, collected, and examined under high power microscopes, are the same filaments also found in human blood, saliva, skin, ear, and dental samples of those afflicted with Morgellons. The Environmental Protection Agency whose duty it is to “protect human health and the environment” has refused to examine samples sent. Repeatedly, the EPA has failed in its mission (not just on this issue, but on many others). I would refer all readers to Clifford Carnicom’s “Aerosols and Morgellons: A Systems Perspective.” March 23, 2009:

www.carnicom.com/aerosols_morgellons_system_perspective.htm

This gives a brilliant overview and shows these connections from the aerosol assault to which we are exposed all the time.

* * *

Our Thinking Is Impaired:

Brain damage from numerous kinds of daily chemical injury is also on a steep increase. I would also refer readers to the ground-breaking work of Dr. Kaye H. Kilburn on Chemical Brain Injury. Millions (possibly billions) of tons of nano-particles of fiber-coated aluminum are part of the Chemtrails mix, and the military has admitted to using it, calling it “chaff.”(11) It is well know that Aluminum causes cognitive impairment and brain damage. It takes years for this damage to become evident. During this time, it works its slow, but insidious, destruction on the brain. But, even in the beginning, muddle thinking is noticeable. Why are so many people acting odd? Many more people appear to have a very short fuse. Why do our children have an epidemic of autism, ADD, ADHD? Why are so many of our young children on long-term prescription drugs for behavioral/cognitive troubles? Why are millions of adults on years of anti-depressant drugs? In our human history, all this is unprecedented. Dangerous vaccine ingredients, including thimerosal [mercury] also play a part. What are all these drugs doing to our society’s “collective” functioning? In addition, what are all the heavy metals, that target brain function that we are breathing daily, also doing to our ability to think clearly? These drugs/vaccines/chemicals/heavy metals give corporations record profits, but often at our expense. We need to address prevention and precaution; but that would cut into corporate profits. A company’s bottom line is money, not our wellbeing. But we are the one’s purchasing their products that keep them in business.

Over these many years of being poisoned, how does the possibly synergistic interaction of Aluminum, Manganese, and Mercury affect the brain and cognitive function? How do cell-phone use, Wi-Fi, daily computer use, and changes wrought by HAARP-induced Electro-Magnetic Frequency [EMF] also affect our ability to think clearly? We MUST DEMAND real answers to these vital questions! However, we will never get answers from those in charge, because they are the ones harming us. How does breathing plasma and Chemtrails daily affect our functioning? All of this is a massive assault on our bodies and our capacity to think clearly. What

happens to a fetus, as it is conceived, with all these dangers surrounding nine months of pregnancy, while the brain is forming and growing? What happens to our DNA with this kind of multi-pronged chemical and electrical assault? What happens to our young babies, toddlers, and youngsters who have this toxic input from conception on? Millions of youngsters carry cell phones with them all the time; and all the while they are breathing a Chemtrails assortment of poisons. “Our Stolen Future” (by Dr. Theo Colburn et al.) addressed the chemical hormone disrupting aspect of some of what is happening; and it is essential reading. But this book was written before the Chemtrails/Weather Modification/HAARP/Geoengineering attack on us was in full swing.

Four things are very obvious:

- 1. Human attention span has dropped dramatically**
- 2. People are very forgetful**
- 3. Short-term memory has been affected**
- 4. Far too many people are impatient, and have very “short fuses”**

For many people, thinking and thought processes are very difficult issues to contemplate or even discuss. No one wants to be told that s/he is not thinking clearly. Even if there are scientific data to support this, it is a concept that goes right to the very heart of who we think we are! It is not you. It is the result of what is being done to all of us! However, it is easier to attack the messenger, than comprehend the enormity of military/government involvement –especially since nothing is reported by mainstream controlled news. It is easier to dismiss valid information, or be on the defensive, rather than take personal responsibility for critical issues that already are detrimentally affecting our lives. Citizenship requires accurate knowledge, participation, and vigilance. Shoppers or couch potatoes are not citizens. All of these bogus media trivia/advertising/DVDs/movies/societal violence are deliberate distractions (for a poorly educated populace) from the serious and urgent issues affecting our lives. This also goes to the core of what we think this nation is all about. Some people simply refuse to go there. Anyone who

is emotionally or intellectually “shut down,” or in denial that there is any problem, or refuses even to consider new ideas, is already at an enormous deficit. They are set in their ways and function on automatic pilot, even if these behaviors are injurious to their own wellbeing.

Understanding who we are and what makes us “tick” all require contemplative time and the ability to think critically. In the chaos of this deliberately caused Depression, when millions of us are out of work, lost our homes, and/or are quite ill, when war and violence are the only things making money, and the police have illegally become an invasive military presence, who has time to THINK? However, if these issues are ever to be addressed, then we must be willing to re-evaluate what we think we know, based on reliable new information. Our window for change is now very small.

If more of us are having trouble thinking clearly, due to what we are breathing and eating, how can we conduct our lives in a safe manner or act intelligently on important decisions that affect our lives? To begin to change requires personal courage, stamina, and fortitude. It is also a known fact that neuronal brain synapses have to be created when someone wants to try something new. With repeated and continuous practice, over a period of time, these new synaptical brain connections are created. Then we feel comfortable, because we have these brand-new pathways in the brain that help us to feel okay, relaxed, and at ease. This is the physiological base. It can be compared with practicing the piano, or learning to dance. With repeated daily practice, scales become easier to do, dance steps become familiar. Then we can play a new tune or learn more complicated dance steps. Then it’s fun to do. A person no longer feels un-easy, because mastery is a new part of who that person is. We all have the capability to do this.

* * *

Another dangerous ingredient found in numerous Chemtrails samples is Ethylene dibromide (EDB). It is highly toxic. It was used in leaded gasoline and “extensively as a soil and post-harvest fumigant for crops and a quarantine fumigant for citrus

and tropical fruits and vegetables” until it was found in ground water and some grains.(11) Why should our farmers have to use such deadly fumigants? It makes no rational sense. These toxic products are for corporate profits, nothing else. In healthy soil, companion planting keeps insects away. However, people have bought into marketing and sales gimmicks, and promotional lies. High-level exposure to EDB can affect and damage the heart, kidneys, liver, and can cause respiratory tract infections and pneumonia. EDB is also a desiccant. It dries up our mucosal tissues and skin (causing severe itching, redness, swelling, and cracked skin that is slow to heal). How many people notice how especially dry their skin is this Winter? EDB is persistent in our soils. It is mutagenic and carcinogenic. It also has been shown to lower sperm count.(12)

Here are some recent US annual figures for 2009(13):

* Coronary Deaths: 616,067. In 2009, 785,000 Americans had a coronary attack. This is now the leading cause of death in the US.

- Cancer Deaths: 562,875
- Brain Cancer: 22,070 new cases diagnosed in 2009.

* Respiratory illnesses (bronchitis, asthma, COPD, and CLRD, the abbreviation for Chronic Lower Respiratory Disease) are the fourth leading cause of death in the US. In 2007, 9.9-million Americans were diagnosed with chronic bronchitis and 4.9 million had emphysema. More than 20-million Americans now live with asthma; and 127,952 have CLRD.

From my own decades of on-going research on women’s reproductive illnesses, these too have increased dramatically. Twenty years ago, women did not have trouble conceiving. Today, this is a major issue for both women and men [male sperm count is down 50%]. How do staggering high rates of Manganese or EDB’s toxicity figure into this? US women also have the highest rate in the world of hysterectomies. Why? It is not simply a one-issue problem. It is rather an assortment of numerous poisons (including heavy metals and chemical hormone disruption) that are now ubiquitous in our environment. How they act

synergistically is not part of most research. Our soil, water, and air are now all highly contaminated. Therefore, a deadly chemical brew that affects our Immune and Central Nervous Systems constantly surrounds our every move. Sleeping or waking, indoors or out, these poisons continue to take a heavy toll on all living things.

For those of us who have chosen an “organic” lifestyle (both in food and other daily necessities), the term “organic” no longer exists. Today, the only difference between “organic” and regular food, is that no pesticides or other chemicals are supposed to be used. But when one factors in all the millions of tons of Chemtrails heavy metals in the air falling regularly on these crops, organics are now poisoned along with everything else in the entire food chain. How many millions of people are spending the extra money to have an apparently safer food supply that really doesn't exist anymore? Why isn't the entire organic community helping to get the word out about this? They could be a powerful source for leadership to help stop this assault.

Regrettably, and an obvious enormous betrayal, is the news this past week that several major organic businesses have “decided it's time to surrender to Monsanto. Top executives from these companies have publicly admitted that they no longer oppose the mass commercialization of GE crops, such as Monsanto's controversial Roundup Ready alfalfa, and are prepared to sit down and cut a deal for ‘coexistence’ with Monsanto and USDA biotech cheerleader Tom Vilsack.”(14) Who was paid off? There is no “co-existence” with these poisoned Genetically Engineered crops. They contaminate everything else. There are 25,000 “organic” farms and ranches involved. How many more people will get cancer from the deadly Genetically Engineered herbicides used and toxic “edible”(sic) plants grown in this poisoned soil? Where is there any healthy, well-balanced soil when there is a daily Chemtrails barrage above and GMOs below? We are in between this.

One of the best online resources for up-to-date GE information and the scientific evidence for the extensive damage Genetically Modified Organisms [GMOs] continue to cause is the London-based Institute of Science in Society [ISIS]: www.isis.org.uk. Dr. Mae-Wan Ho, the Director of ISIS, has written several books on the dangers of GMOs. F. William Engdahl's "Seeds of Destruction" is also an excellent book to find out what the corporations are doing to control all seed production worldwide and destroy our web of life. None of these companies have our safety in their corporate practices. It's all about high profits at any cost along with grave harm to all of us. We have been sold out again in some nasty back-room deal. When are we going to wake up and realize that we do have enormous and untapped consumer power?

In addition, high-tech "Star Trek" type instruments surround our every move. From cell phones and their towers, Wi-Fi, and HAARP(15). Added to this horrific brew also are illegal and criminal military uses of Depleted Uranium on civilians, and the Gulf of Mexico's nine-month attack under the deadly Corexit dispersant (now carried on the winds around our planet) mixed with Chemtrails, and other carcinogenic chemicals. Our immune systems and our lives are under chronic siege! Anyone living anywhere near the Gulf of Mexico is already at life risk. The natural functioning of our immune systems has been severely compromised and damaged. Despite national and international laws that supposedly forbid the use of these assorted dangers on humans, nothing has been done to stop any of this. We continue to be uninformed experimental laboratory animals for secret agendas by imbedded "Trojan horses" that are causing all of us extreme, but often invisible, harm every day. In humankind's entire history, there has never been such an environmental toxic assault on us. As I have written numerous times: Invisible technology, or the chemicals we don't see (but are breathing and eating), doesn't mean we are safe. None of this is sustainable for life on our planet. Certainly not for our children and grandchildren.

It is possible not to shop at any company that harms us. Why should we support

them with our hard-earned money (and its increasing shrinking power)? Do we want to continue to get sucked into a completely broken system that does not value anything but destruction and war? Just look at all the social services that are being continuously cut to the bone, while the behemoth military budget is the largest in our history. All our social services are being gutted. Global Research reported on January 18 that “Obama may cut Social Security.”(16) Do we get it? Everything else, that once made ours a shining example to other countries, is being deliberately destroyed by those in charge. These economic and environmental crises are no accident. They are planned.

We must now join together in a concerted effort to collect evidence across the country. Get your air, soil, water, and snow tested by a reputable independent lab for heavy metals, biological components, and polymers. Put samples in clean (sterilized) glass jars, not plastic. (More information on this will be posted very shortly.) None of these things belong in the air we breathe! Once, we were part of a wonderfully inter-connected harmony of all living things. Our gorgeous “blue marble” is our only home; so, we cannot let this destruction continue. If we value what is left of our lives and those whom we love, this must be stopped! In ancient Greece, the Earth was represented by the Goddess Gaia, Mother Earth. She is now under daily and chronic siege by those in charge; and we are an integral part of this horrific assault. For malevolent and secret agendas, they have created havoc and done nothing but continue to put us all in harm’s way.

Look up at the sky! Really look. Smell the air. Can you take a deep breath, without coughing or choking? None of this is natural. None of this was made by Mother Nature. We, the citizens of this planet, must begin to take a new and safe direction. Now, it must be in our hands.

ADDENDUM, Feb. 6, 2011. Weather Modification Evidence: There is a brand new You Tube posted on Feb. 2, of radar verifying that HAARP was involved with the

intense, freakish Winter storms that covered two-thirds of the US last week. Another storm is due the weekend of Feb. 5-6. Please share this:

www.youtube.com/watch?feature=player_embedded&v=_jXURK4yK_o

Here are some photos and commentary on these storms from London's The Daily Mail (Feb. 4):

www.dailymail.co.uk/news/article-1353169/Winter-storm-Bomb-scene-blizzard-ice-snow-killed-12-crushed-buildings.html

and

NASA photos:

For those readers unfamiliar with what HAARP is and what it does, there are two excellent books: Dr. Rosalie Bertell's "Planet Earth: The Latest Weapon of War" and Dr. Nick Begich and Jeane Manning's "Angels Don't Play This Haarp." Both of these are essential reading.

NOTES:

Special thanks: to Dr. R. Michael Castle for his continued sharing of research and illuminating conversations, and also to Bridget Colman Conroy, Arizona Skywatch. I urge readers to check out these references below.
