

Trees – Test Your Tree

Tree Bark/Water Testing Information Sheet

Download Attachments below:

Testing Sheet

Things to look for in dying trees:

- Tube Sock Syndrome - the bottoms of the trees are turning white
- Sprouting at bottom of trunk
- Thinning of canopy

Tree bark should not have these toxic chemicals in them!

Projects

RESEARCH PROJECT #1 – Toxic Chemicals in Tree Bark

Recent certified laboratory test on tree bark in California have been positive for aluminum, barium, strontium and titanium. These trees show signs of death and research will be conducted to determine if these toxic chemicals are the cause of increase tree decline though out the world. Note the silver/white on the trees at this South Lake Tahoe Park.

Environmental Voices is currently recruiting scientists, plant pathologists, and other scientific professionals to become a part of our research team. Anyone interested should send their resume to environmentalvoices@yahoo.com.

RESEARCH PROJECT #2 – Multiple-Chemical Sensitivities

There is not much known about the cause of and cure for Multiple-Chemical Sensitivities and Environmental Voices plans to begin a research study on this critical health condition.

Environmental Voices is currently recruiting physicians, medical researchers, other scientific professionals to become a part of our research team. Anyone interested should send their resume to environmentalvoices@yahoo.com.

RESEARCH PROJECT #3-Testing Rain Water
