Subject: Desert Moon Rings

Message Body:

I moved to Palm Desert, California in the Coachella Valley that is East of Los Angeles and North of San Diego in May of 2015. I have been observing the night sky while in my hot tub four to five nights per week.

Normally there are no Chemtrails at night with exceptions that I have noticed as a definite pattern.

When there are rings around the Moon at night from November to April, those events are precursors to rain on the coast and in the desert. Quite often when there is a ring around the Moon, Chemtrails fill the sky and disperse the ring.

Over the next few days there is no rain.

When the few times Chemtrails do not disperse the ring around the Moon, normal rain patterns occur.

Tonight there was a ring around a half Moon and Chemtrails filled the sky.

During the daytime, the skies of the desert are filled with Chemtrails. Once I saw a formation of four aircraft flying West to East dispersing Chemtrails and numerous other single plants that clouded the sky for the remainder of the day.

Does seem by manipulating the moisture patterns in the Coachella Valley, a drought pattern for the entire Southern California, Nevada and Arizona regions can be created.

When I am in my hot tub I Moon the pilots or the drone operators of our destruction.

The early Chemtrail missions had to have pilots but common sense dictates the flights have to be mostly drone operated by computers thus providing much tighter security and less public awareness.

There are no whistleblowers in the skies.
