CIA Whistleblower Makes Case For Weaponized Global Warming

From the Company of Shadows – October 16, 2012 – By Kevin Michael Shipp (Amazon)

Aug 5, 2016: Author, Kevin Shipp presents key issues involving government black operations and the extent to which the burden of sworn secrecy is a shackle to millions of federal workers in alphabet agencies including the FAA, NASA and NOAA.

Would-be agency whistleblowers are made aware they have no protection and that uttering the wrong word in violation of their oath of secrecy could result in serious career failure and possible physical harm including reprisals and endangerment to family members and loved-ones.

Covert climate engineering including massive aerosol dumps and electromagnetic energy networks are designed to manipulate the climate. While civilian investigators once thought climate engineering was intended to prevent surface warming by blocking the sun, another reality has emerged to turn that theory on it's head:

Why would covert climate engineering be so aggressively deployed but fail to erase the effects of global warming at a time when the public is increasingly skeptical about climate change?

This question begs an alternative theory that weaponized climate engineering is the chief cause of surface warming in order to convince global populations to support draconian UN policies that conform to the New World Order goal of Agenda-21 and beyond.

STUDY: Low growth in carbon emissions continues for third year

While no significant increase in global CO2 has been measured in 3 years surface temperatures continue to rise along with observed intensity of Climate Engineering.

Despite low CO2 emissions, surface warming and carbon sink deprivation due to Climate Engineering causes atmospheric CO2 to remain artificially high.

“The Global Carbon Budget analysis also shows that, in spite of a lack of growth in emissions, the growth in atmospheric CO2 concentration was a record-high in 2015, and could be a record again in 2016 due to weak carbon sinks.

Prof Le Quéré said: “Part of the CO2 emissions are absorbed by the ocean and by trees. With temperatures soaring in 2015 and 2016, less CO2 was absorbed by trees because of the hot and dry conditions related to the El Niño event. Atmospheric CO2 levels have exceeded 400 parts per million (ppm) and will continue to rise and cause the planet to warm until emissions are cut down to near zero.”

BIO: Author, Kevin Shipp, former CIA Officer and Anti Terrorism expert, held several high level positions in the CIA. He was assigned as a protective agent for the Director of Central Intelligence, a counterintelligence investigator, team leader protecting sensitive CIA assets from assassination, manager of high risk Counter Terrorism Center protective operations, lead instructor for members of allied governments, internal staff security investigator and a polygraph examiner tasked with protecting the CIA from foreign agent penetration. He is the recipient of two CIA Meritorious Unit Citations, three Exceptional Performance Awards and a Medallion for overseas covert operations. Shipp also supervised the Department of State Anti Terrorism Assistance program and managed the protective detail assigned to the president of Afghanistan following the US invasion.
